## 1. Put Translation from Excel to Database

From the Excel file, enter your translation into the last column, which is called “TextData (New Language)”.

- Enter the translation for every row. If you do not want to translate some keywords, delete those rows. Otherwise, it will show up as blank in your store front.
- By default, the words that you do not translate will use English as a fallback language. Please refer to “Base language for undefined keyword” option in the Quick Start guide for more information.

1. Open the database table “Culture”.
2. Fill all culture details:
  - CultureID: Enter the number greater than the existing cultureID number.
  - Name: Added the culture name according to Microsoft .NET culture format. <http://msdn.microsoft.com/en-us/library/system.globalization.cultureinfo%28VS.80%29.aspx>
  - DisplayName: Enter the name of your language.
  - Enabled: This box should be checked.

	CultureID	Name	DisplayName	Enabled
▶	1	en-US	English	<input checked="" type="checkbox"/>
	2	th-TH	Thai	<input checked="" type="checkbox"/>
	3	zh-CN	Chinese	<input checked="" type="checkbox"/>
	4	nl-NL	Dutch	<input checked="" type="checkbox"/>
	5	el-GR	Greek	<input checked="" type="checkbox"/>
	6	es-ES	Spanish	<input checked="" type="checkbox"/>
	7	pt-PT	Portuguese	<input checked="" type="checkbox"/>
	8	fr-FR	French	<input checked="" type="checkbox"/>
*	0			<input checked="" type="checkbox"/>

3. Back up your Excel file.
4. In the Excel file, delete “TextData (English)” and “Path” columns (column B & D in the original file).
5. Add a column called “CultureID” as the second column from the left as shown below.
6. Enter the Culture ID from step 2 into every row in the Excel file.
